PROFILE

Lead web engineer with nineteen years on the web, the last five at a US digital-health company where I carried features across every layer they touched — data model, API, interface and the infrastructure underneath. I work primarily in TypeScript: Next.js and React at the front, NestJS and PostgreSQL behind, inside an Nx monorepo on GCP. My specialism is the shared and the embeddable — SDKs, component libraries and plugin platforms that other engineers and other companies build on, where public API surface, versioning and backward compatibility are the actual work. I write the design down before I write the code, and I review widely: 442 pull requests for more than 25 engineers across the organisation, alongside 391 of my own.

EXPERIENCE

Lead Web Engineer · Pager Health

Jun 2021 – Sep 2026 · 5 yrs 4 mos

Remote — US company

US digital-health company building virtual-care products for enterprise health plans and insurers. I led the web engineering for a provider-search and appointment-scheduling product, and worked across the member-facing SDK, the agent console, the backend services and the infrastructure behind them.

- Led web engineering for a provider-search and appointment-scheduling product across three major versions, from an embedded chat widget to a standalone multi-tenant web application — authored the provider data-model RFC through architecture review, implemented it in a NestJS/PostgreSQL Nx monorepo, built the member-facing UI, and provisioned the Cloud Run service, Terraform modules and delivery pipelines to production.
- Migrated member and agent video calling from Twilio to the Zoom Video SDK across five services and ten deployment environments, covering SDK core, embedded widget, agent console, Helm CSP policy and external consumer documentation.
- Built and maintained an embeddable patient SDK in TypeScript — core client, component library and widget — published with semantic-release and consumed by enterprise health-plan clients, with versioning and backward compatibility managed across a multi-package surface.
- Authored the company's internationalisation standard, then implemented it across eight backend and frontend services, adding Spanish and Portuguese for Latin-American and Brazilian markets.
- Designed and shipped an event-driven handoff architecture on GCP Pub/Sub spanning a publisher service, two subscriber services, infrastructure provisioning and feature-flag wiring.
- Delivered WhatsApp Business as a member communication channel end to end across seven services — Twilio templated messages, configuration UI, routing and agent send flow.
- Authored 391 pull requests across 49 repositories and reviewed 442 for more than 25 engineers, reviewing across teams and across the stack rather than only my own area.

Partner & CTO · Soluciones yPunto

Jan 2016 – Jun 2021 · 5 yrs 6 mos

Santa Fe, Argentina

Formed when the software-development arm of Linked Comunicaciones merged with Soluciones yPunto, giving the combined company the capacity to take on larger clients. I set technical direction and led delivery.

- Set technical direction and led delivery for client web projects, taking on engagements larger than either predecessor company had handled alone.
- TODO: a project you are proud of here — what it was, the scale, and what you owned technically.
- TODO: team size you led, and anything you can quantify (clients, uptime, delivery time, revenue).

Founding Partner & CTO · Linked Comunicaciones

Jan 2010 – Jan 2016 · 6 yrs 1 mo

Santa Fe, Argentina

A startup founded with university friends providing web development and hosting to local companies, with clients across gaming, construction and local government.

- Built the technical practice from zero — development, hosting and infrastructure — for clients across several industries.
- Published reusable components from client work as open source: CakePHP plugins, JavaScript libraries and upstream bug fixes.

Project Manager, Web Development · Cenys Network SL (Eniti Media SL)

Jan 2008 – Jan 2010 · 2 yrs 1 mo

Málaga, Spain / Santo Tomé, Argentina

Ran the web development department for a Spanish media company, working across two countries.

Systems Administrator & Research Assistant · Universidad Tecnológica Nacional

Jan 2007 – Dec 2007 · 1 yr

Santa Fe, Argentina

Network administration and configuration at the university's connectivity labs, alongside a research post in the technological-education programme.

SKILLS

Frontend: TypeScript, Next.js, React, Vue, Svelte, Tailwind CSS, SCSS / CSS architecture, Design systems & component libraries, Embeddable SDKs & widgets, Micro-frontend & plugin architectures, Storybook, i18next / internationalisation, Content Security Policy

Backend: Node.js, NestJS, REST API design, PostgreSQL, TypeORM, Event-driven architecture (GCP Pub/Sub), JSON Schema contracts, Multi-tenancy & data-level tenancy scoping, Auth (AWS Cognito, Microsoft SSO), Hapi, PHP — CakePHP, Symfony, Laravel (pre-2021)

Infrastructure & Delivery: Terraform, Google Cloud Platform (Cloud Run, Pub/Sub, Firebase, load balancers), Docker, Kubernetes & Helm, Nx monorepos, GitHub Actions, Harness CD, Trunk-based development, semantic-release & npm package publishing

Testing & Observability: Jest, Cypress, MSW (mock service worker), New Relic (APM & Browser), Datadog RUM, Structured logging, Flaky-test remediation

Leadership & Practice: Technical leadership, RFCs & written technical design, Code review at scale, Mentoring, Cross-team coordination, Incident root-cause analysis, Agile delivery & refinement, AI-assisted engineering workflows

EDUCATION & LANGUAGES

Education

Analista Universitario en Sistemas (University Systems Analyst) · Universidad Tecnológica Nacional — Facultad Regional Santa Fe · 2003 – 2013 · Intermediate degree of the Information Systems Engineering programme.

Ingeniería en Sistemas de Información — coursework through fifth year · Universidad Tecnológica Nacional — Facultad Regional Santa Fe · 2003 – paused · 30 subjects completed. Paused to work full-time.

Languages

Spanish — Native

English — Professional working proficiency · Five years working entirely in English with a US-based team — written technical design, RFC and architecture review, and daily collaboration.
