PROFILE

I'm a developer with almost 20 years of experience. I've had the chance to work with diverse technologies during my career, but most of my experience was building on web technologies, that's why Lead Web Engineer title is what best describes me.

I feel comfortable owning features during the whole lifecycle: from the early design to the implementation, monitoring and maintenance.

The last five years I've been working for a US digital-health company where I carried features across every layer they touched: data model, API, interface and the infrastructure underneath.

SKILLS

Although I've been focused on front end and web technologies, I would argue that my main strength is versatility, as I worked with an extensive and diverse list technologies that goes from web stack to desktop and mobile, I touched almost every well known database engine, and I've done infrastructure before DevOps was a thing.

Frontend: TypeScript, Next.js, React, Vue, Svelte, Tailwind CSS, SCSS / CSS architecture, i18n / l10n, Storybook, Design systems & component libraries, Embeddable SDKs & widgets, Micro-frontend & plugin architectures, Content Security Policy

Backend: Node.js, NestJS, REST API design, Event-driven architecture (GCP Pub/Sub), RabbitMQ, JSON Schema contracts, Multi-tenancy & data-level tenancy scoping, Auth (AWS Cognito, Microsoft SSO), Hapi, PHP (CakePHP, Symfony, Laravel), Python

Database: PostgreSQL, MySQL/MariaDB, SQL Server, Oracle, MongoDB, Firebase, ORM's (TypeORM, CakePHP, Symfony), Migrations

Infrastructure & CI/CD: Terraform, Google Cloud Platform (Cloud Run, Pub/Sub), Docker, Kubernetes & Helm, Nx monorepos, GitHub Actions, Harness CD, Trunk-based development, semantic-release & npm package publishing, Aws (Cognito, CloudFront, Lambda, SES)

Testing & Observability: Jest, Cypress, MSW (mock service worker), New Relic (APM & Browser), Datadog RUM, Structured logging, Flaky-test remediation

Leadership & Practice: Technical leadership, RFCs & written technical design, Code review at scale, Mentoring, Cross-team coordination, Incident root-cause analysis, Agile delivery & refinement, AI-assisted engineering workflows

AI

AI is part of how I build software day to day, not a novelty I bolt on. Claude Code is my primary tool for analysis, technical design and implementation — I use it to draft RFCs, review code and

work through cross-repo changes, and I'm comfortable writing agent skills and prompt-driven workflows rather than just prompting ad hoc.

I've also built AI into the product, not just around it. At Pager Health I worked on member-facing conversational agents, first on Dialogflow and later migrated to Google's Agent Development Kit (ADK), with a Python service connecting them to the rest of the platform. More recently I helped ship an AI-powered search experience for our provider-search product, using Gemini 3.1 Flash Lite as the model behind it.

EXPERIENCE

Pager Health

Jun 2021 – Sep 2026 · 5 yrs 4 mos

Remote — US company

US digital-health company building virtual-care products for enterprise health plans and insurers.

- **Staff Engineer** — Mar 2026 – Sep 2026 · 7 mos

  Authored the company's internationalization standard, then implemented it across backend and frontend services, adding Spanish and Portuguese for Latin-American and Brazilian markets.

- **Lead Web Engineer** — Oct 2022 – Feb 2026 · 3 yrs 5 mos

  Led web engineering for a provider-search and appointment-scheduling application: authored the provider data-model RFC, implemented it, built the member-facing UI, and provisioned the Cloud Run service, Terraform modules and delivery pipelines to production.

  Migrated member and agent video calling from Twilio to the Zoom Video SDK across five services, covering SDK core, embedded widget, agent console, Helm CSP policy and external consumer documentation.

  Delivered WhatsApp Business as a member communication channel end to end across seven services: Twilio templated messages, configuration UI, routing and agent send flow.

- **Senior Front-end Engineer** — Jun 2021 – Sep 2022 · 1 yr 4 mos

  Built and maintained an embeddable patient SDK, consumed by enterprise health-plan clients.

Partner & CTO · Soluciones yPunto

Jan 2016 – Jun 2021 · 5 yrs 6 mos

Santa Fe, Argentina

Formed when the software-development branch of Linked Comunicaciones merged with Soluciones yPunto, giving the combined company the capacity to take on larger clients. I set technical direction and led delivery.

- Set technical direction and led delivery for client web projects, taking on engagements larger than either predecessor company had handled alone.
- Moved from public/institutional website projects to complex systems that powered customers business for external and internal users.
- Developed complete solutions including: public website, web apps (pwa), mobile apps (android and ios), internal admin tools, backend, api's, databases and the infrastructure that serves them.

Founding Partner & CTO · Linked Comunicaciones

Jan 2010 – Jan 2016 · 6 yrs 1 mo

Santa Fe, Argentina

A startup founded with university friends providing web development and hosting to local companies, with clients across gaming, construction and local government.

- Built the technical practice from zero (development, hosting and infrastructure) for clients across several industries.
- Published reusable components from client work as open source: CakePHP plugins, JavaScript libraries and upstream bug fixes.

Project Manager · Eniti Media SL (former Cenys Network SL)(extinct)
Jan 2008 – Jan 2010 · 2 yrs 1 mo
Málaga, Spain / Santo Tomé, Argentina

Ran the web development department for a Spanish media company, working across two countries.

- Worked with internet ads, marketing campaigns and partner programs, massive e-mail campaigns (millions of e-mails sent per day).
- Services optimization for response time under heavy load.
- DB Administration of large databases with +100 millions records tables.

Systems Administrator & Research Assistant · Universidad Tecnológica Nacional
Jan 2007 – Dec 2007 · 1 yr
Santa Fe, Argentina

Network administration and configuration at the university's connectivity labs, alongside a research position in a math-applied program.

EDUCATION & LANGUAGES

Education

Analista Universitario en Sistemas (Systems Analyst) · Universidad Tecnológica Nacional · 2003 – 2013 · Intermediate degree of the Information Systems Engineering career.

Ingeniería en Sistemas de Información — coursework through fifth year · Universidad Tecnológica Nacional · 2003 – on hold · 30 subjects completed.

Languages

Spanish — Native

English — Professional working proficiency · Five years working in English with a US-based team, written technical design, RFC and architecture review, and daily collaboration.
